

Recommendation T/R 22-02 (Lecce 1989 (CR))

**FREQUENCY BAND TO BE DESIGNATED
FOR THE EUROPEAN DIGITAL CORDLESS TELECOMMUNICATION SYSTEM (DECT)**

Recommendation proposed by the "Radio Administration, Regulation and Frequency Management"
Working Group T/WG 15 (RARF)

Text of the Recommendation adopted by the "Telecommunications" Commission:

"The European Conference of Postal and Telecommunications Administrations,

considering

- a) that the DECT system being developed on an European basis will require up to 20 MHz in high density areas and at least 10 MHz in low density areas,
- b) that subject to the system development of DECT additional frequency spectrum may be required,
- c) that a common European frequency band for this application is highly desirable,
- d) that the DECT system may not be introduced at the same date all over Europe,

recommends

- a) that the frequency band 1880-1900 MHz is designated for DECT in all CEPT member countries,
- b) that after the implementation of the DECT system, the use of this band for DECT shall have priority over other users in the same band."
