# ERC RECOMMENDATION 70-03 (Tromsø 1997 and subsequent amendments\*)

#### RELATING TO THE USE OF SHORT RANGE DEVICES (SRD)

Recommendation adopted by the Frequency Management, Radio Regulatory and Spectrum Engineering Working Groups

#### **Foreword**

This Recommendation sets out the general position on common spectrum allocations for Short Range Devices (SRDs) for countries within the CEPT. It is also intended that it can be used as a reference document by the CEPT member countries when preparing their national regulations in order to keep in line with the provisions of the R&TTE Directive.

In using this Recommendation it should be remembered that it represents the most widely accepted position within the CEPT but it should not be assumed that all allocations are available in all countries. An indication of where allocations are not available or where deviations from the CEPT position occur is to be found in Appendix 3.

It should also be remembered that the pattern of radio use is not static. It is continuously evolving to reflect the many changes that are taking place in the radio environment; particularly in the field of technology. Spectrum allocations must reflect these changes and the position set out in this Recommendation is therefore subject to continuous review.

Moreover, many administrations still have national allocations that do not conform to the CEPT position set out in this Recommendation.

For these reasons, those wishing to develop or market SRDs based on this Recommendation are advised to contact the relevant national administration to verify that the position set out herein still applies.

When selecting parameters for new SRDs, which may have inherent safety of human life implications, manufacturers and users should pay particular attention to the potential for interference from other systems operating in the same or adjacent bands. Manufacturers should advice users on the risks of potential interference and its consequences

#### INTRODUCTION

The CEPT has adopted Recommendations to deal with low power devices, and specific short range devices. The European Telecommunications Standards Institute (ETSI) has now developed harmonised standards and standards for the majority of these devices. Other standards or technical specifications might be applicable within the framework of the R&TTE Directive.

The term "Short Range Device" (SRD) is intended to cover the radio transmitters which provide either unidirectional or bi-directional communication and which have low capability of causing interference to other radio equipment. SRDs use either integral, dedicated or external antennas and all modes of modulation can be permitted subject to relevant standards. Due to the many different services provided by these devices, no description can be exhaustive, however, the following categories are amongst those covered:

> Telecommand and Telecontrol Telemetry Alarms Speech and Video.

<sup>\*</sup> See cover sheet for current status of Recommendation.

This Recommendation describes the spectrum management requirements for SRDs relating to allocated frequency bands, maximum power levels, equipment antenna, channel spacing, duty cycle, licensing and free circulation. In addition for CEPT countries which have not implemented the R&TTE Directive it also sets out the conformity assessment and marking requirements. However, for CEPT countries that have implemented the R&TTE Directive, art.12 (CE-marking) which states that "any other marking may be affixed to the equipment provided that the visibility and legibility of the CE-marking is not hereby reduced" and art. 7.2 which states that "member states may restrict the putting into service of radio equipment only for reasons related to the effective and appropriate use of the radio spectrum, avoidance of harmful interference or matters relating to public health" apply.

Appendix 1 Table 1 lists the applications covered by this Recommendation. Tables 2 to 7 in Appendix 1 list parameters relevant to these applications. In Table 6 only the last line is applicable in countries implementing the R&TTE Directive. The Tables in the following annexes give the possible combinations which may be utilised for different applications. For example, in Annex 1 for the frequency band 40.660-40.700 MHz as mentioned in the fourth row of the first column, equipment may operate with maximum radiated power level 8 (i.e., 10 mW e.r.p.). Equipment in the frequency band 61.0-61.5 GHz may operate with maximum radiated power level 11 (i.e., 100 mW e.i.r.p.). In neither case are individual licences required and both antenna type 1 (integral antenna) and type 2 (dedicated antenna) may be applied. The same allotment applies to channel spacing, duty cycle, and for countries which have not implemented the R&TTE directive conformity assessment, marking and free circulation.

Relevant ERC Decisions and standards produced by ETSI are mentioned in Appendix 2 of this Recommendation for information purposes. Relevant ETSI Standards are also mentioned by their relevant (ETS/EN) number in the corresponding annexes. However, this list is not necessarily exhaustive and other standards or technical specifications may be applicable. For countries having implemented the R&TTE Directive its art. 10 procedures will then be applied for conformity assessment where either harmonised standards or with the involvement of a Notified Body also other standards and specifications may be applicable. Further details can be found on the relevant EC and the ERO web sites (www.ero.dk).

"The European Conference of Postal and Telecommunications Administrations,

#### considering

- a) that SRDs in general operate in shared bands and are not permitted to cause harmful interference to other radio services;
- b) that in general SRDs cannot claim protection from other radio services;
- c) that due to the increasing interest in the use of SRDs for a growing number of applications it is necessary to harmonise frequencies and regulations for these devices;
- d) that there is a need to distinguish between different applications;
- e) that additional applications and associated annexes will be added as necessary;
- f) that the list of applications currently covered by this Recommendation is shown in Appendix 1, Table 1;
- g) that, for countries that have not implemented the R&TTE Directive, the conformity assessment, type approval (if applicable), marking and free circulation (i.e. carrying) requirements within this Recommendation are applicable to SRDs;
- h) that maintenance of Appendices 2 and 3 and also the related cross-references in the Annexes may be undertaken by the ERO based on information from Administrations,
- i) that information about placing SRD equipment on the market and its use can be obtained by contacting individual administrations, especially with regard to equipment operating in frequencies or frequency bands that may be designated for SRDs by administrations in addition to those covered in this recommendation;

- j) that for those countries implementing the provisions of this Recommendation, national restrictions in respect of the annexes can be found in Appendix 3;
- k) that the CEPT should amend or abrogate relevant parts of CEPT Recommendations where indicated in the annexes but equipment marketed before the adoption of this ERC Recommendation marked with abbreviations defined in the CEPT Recommendations to be abrogated should be allowed continuation of free circulation (i.e., carrying) and use.

#### recommends

- 1) that CEPT Administrations implement the parameters listed in Appendix 1 (Applications and Parameter Tables) in accordance with the indications mentioned in the annexes, except for CEPT countries that have implemented the R&TTE Directive where, in lieu of Table 6 of Appendix 1, the provisions of Article 12.1 of the Directive are applied,
- 2) that technical parameter limits should not be exceeded by any function of the equipment;
- 3) that, for CEPT countries that have not implemented the R&TTE Directive, whenever there are ERC Decisions harmonising the radio parameters and adopting European standards the ERC Decision ERC/DEC/(97)10 is applicable. CEPT Administrations that have not implemented the R&TTE Directive should accept the conformity assessment performed by bodies in other CEPT member countries without requiring national conformity assessment;
- 4) that, for CEPT countries that have not implemented the R&TTE Directive, whenever recommends (3) cannot be applied but there is an ETSI standard mentioned in the Annexes, those Administrations should accept the test results reached by an accredited test laboratory in another country in accordance with ERC Recommendation CEPT/ERC/REC 01-06 (Brussels 1994) (Procedure for mutual recognition of type testing and type-approval for radio equipment);
- 5) that in cases not covered by recommends 3 and 4, CEPT Administrations that have not implemented the R&TTE Directive should introduce national conformity assessment based on national type testing;
- 6) that CEPT Administrations should allow visitors from other countries to carry and use their equipment temporarily without any further formalities whenever free circulation and the use of the equipment is indicated in the annexes, unless there are national restrictions as shown in Appendix 3."

#### Note:

Please check the ERO web site (  $\underline{www.ero.dk}$  ) for the up to date position on the implementation of this and other ERC Decisions.

8.	10 mW <sup>1</sup>
9.	25 mW <sup>1</sup>
10.	50 mW <sup>1</sup>
11.	100 mW <sup>1</sup>
11a.	200 mW <sup>1</sup>
12.	500 mW <sup>1</sup>
13.	1 W <sup>1</sup>
14.	2 W 1
15.	8 W <sup>1</sup>
16.	To be determined (t.b.d.) <sup>1</sup>
17.	55 dBm peak power <sup>1</sup> 50 dBm average power <sup>1</sup> 23.5 dBm average power <sup>1</sup> <sup>2</sup>
18.	Power requirements defined in relevant annex.

Levels are either effective radiated power (e.r.p.) or equivalent isotropically radiated power (e.i.r.p.) as indicated in the relevant annex.

Pulsed radar only.

Table 3: Transmitter antenna source<sup>1</sup>

	Type of transmitter antenna
1.	Integral (no external antenna socket)
2.	Dedicated (type approved with the equipment)
3.	External (equipment type approved without an antenna)

**Table 4. Channel spacing permitted** 

	Channel spacing
1.	5 kHz
2.	6.25 kHz
3.	10 kHz
4.	12.5 kHz
5.	20 kHz
6.	25 kHz
7.	50 kHz
8.	75 kHz
9.	100 kHz
10.	150 kHz
11.	200 kHz
12.	Other channel spacing - see specific annex
13.	No channel spacing – whole stated frequency band may be used

In the frequency bands where channel spacing is defined the centre frequency of the first channel is at a distance of *channel spacing/2* from the lower frequency band edge.

 $^{1}$  In specific cases the antenna information is an essential requirement to facilitate sharing

**Table 5: Licensing requirements** 

	Individual licence	
1.	Required <sup>1</sup>	
2.	Not required	

Table 6: Conformity assessment, marking requirements and free circulation<sup>2</sup>

	Conformity assessment	Marking	Free circulation and use
1.	Mutual recognition of conformity assessment ERC/DEC/(97)10	Rxxxx SRD Aa <sup>3</sup>	Yes <sup>4</sup>
2.	Mutual recognition of test results (CEPT/ERC/REC 01-06 (Brussels 1994))	CEPT SRD Aa Y <sup>3</sup>	Yes <sup>4</sup>
3.	National conformity assessment <sup>5</sup>	National marking	No
4.	R&TTED Article 10	R&TTED Article 12	R&TTED Article 7.2

<sup>&</sup>lt;sup>1</sup> A licence may not be necessary in certain CEPT countries.

<sup>&</sup>lt;sup>2</sup> This whole Table 6 has an informative nature and together with entries in the Annexes for conformity assessment it gives options foreseen possible in each case. The inclusion of this Table does not intend to recommend selection of any of these option because the availability of these options in a particular country is bound by the implementation of the R&TTE directive in that country. Even if the markings defined in this Table cannot be any more required in countries implementing the R&TTE Directive and are neither any more seen necessary by market surveillance authorities even in other CEPT countries, manufacturers are encouraged to use the SRD Aa code to identify the Radio Interfaces in voluntary marking and/or documentation accompanying the equipment.

<sup>&</sup>lt;sup>3</sup> 'xxxx' is the identification number of the responsible conformity assessment body. The updated list of these identification numbers will be available from the ERO.

<sup>&#</sup>x27;A' is the number of the relevant Annex associated with this recommendation.

<sup>&#</sup>x27;a' is the letter of the leftmost column in the Annexes defining the frequency band alternative. 'a' may be more than one letter in the case of multi-band equipment. All frequency bands in which equipment is intended to operate must be specified.

<sup>&#</sup>x27;Y' is the symbol for the country which issued the type approval.

 $<sup>^{4}</sup>$  There are restrictions as defined in Appendix 3

<sup>&</sup>lt;sup>5</sup> National conformity assessment may also be based on mutual recognition of test results (CEPT/ERC/REC 01-06).

#### **Table 7: Duty cycle categories**

For the purposes of this Recommendation the duty cycle is defined as the ratio, expressed as a percentage, of the maximum transmitter "on" time on one or more carrier frequencies, relative to a one hour period.

Where an acknowledgement message is required, the additional transmitter "on" time shall be included.

For pre-programmed devices the maximum transmitter "on" time and minimum "off" time are given in the following table.1

	Name	Transmitting time/Full cycle <sup>1</sup>	Maximum transmitter "on" time <sup>2</sup> (seconds)	Minimum transmitter "off" time <sup>2</sup> (seconds)	Explanation
1	Very Low	<0.1%	0.72	0.72	For example, 5 transmissions of 0.72 seconds within one hour.
2	Low	<1.0%	3.6	1.8	For example, 10 transmissions of 3.6 seconds within one hour.
3	High	<10%	36	3.6	For example, 10 transmissions of 36 seconds within one hour
4	Very High	Up to 100%	-	-	Typically continuous transmissions but also those with a duty cycle greater than 10%

 $<sup>^{1}</sup>$  The ETSI standard EN 300 220-1 gives a further guide in section 8.9 for the definition, the declaration and the rationale to define duty cycle categories using pre-programmed or software controlled devices. In case of manual operated equipment.

These limits are advisory with a view to facilitating sharing between systems in the same frequency band.

# Appendix 2

### List of relevant ERC Decisions, Recommendations and ETSI Standards

ERC Decisions	
ERC/DEC/(92)02	On the frequency bands to be designated for the coordinated introduction of Road Transport Telematics Systems.
ERC/DEC/(95)01	On the free circulation of radio equipment in CEPT member countries.
ERC/DEC/(96)03	On the harmonised frequency band to be designated for the introduction of High Performance Radio Local Area Networks (HIPERLANs).
ERC/DEC/(96)15	On the adoption of approval regulations for radio equipment to be used for wireless microphones in the 25 MHz to 3 GHz frequency range to be used in the mobile service based on the Interim European Telecommunications Standard (I-ETS) 300 422.
ERC/DEC/(96)16	On the adoption of approval regulations for radio equipment to be used for wide band audio links in the frequency range 25 MHz to 3 GHz based on the European Telecommunications Standard (ETS) 300 454.
ERC/DEC/(96)17	On the adoption of approval regulations for radio equipment to be used for wide band data transmission operating in the frequency range 2.4 GHz to 2.4835 GHz and using spread spectrum modulation techniques based on the European Telecom-munications Standard (ETS) 300 328.
ERC/DEC(97)06	On the harmonised frequency band to be designated for Social Alarm Systems.
ERC/DEC/(97)10	On the mutual recognition of conformity assessment procedures including marking of radio equipment and radio terminal equipment.
ERC/DEC/(98)05	On adoption of national type approval regulations for short range devices operating in the frequency range 25 to 1000 MHz with power levels of up to 500mW based on the European Standard (Telecommunications Series) EN 300 220-1.
ERC/DEC/(98)30	ERC Decision of 23 November 1998 on the adoption of approval regulations for Automatic Vehicle Identification (AVI) for railways based on the European Standard (Telecommunications series) EN 300 761 V1.1.1 (1998-01) (operating in the 2.45 GHz ISM band).
ERC/DEC/(99)07	ERC Decision of 10 March 1999 on the adoption of approval regulations for short range devices operating in the frequency range 1 GHz to 25 GHz based on the Interim European Telecommunications Standard (I-ETS) 300 440
ERC/DEC(99)23	ERC Decision of 29 November 1999 on the harmonised frequency bands to be designated for the introduction of High Performance Radio Local Area Networks (HIPERLANs)

# **ERC Recommendations**

CEPT/ERC/REC 01-06 Procedure for mutual recognition of type testing and type-approval for radio equipment.

## ETSI Standards

ETSI Standards	
Generic standards	
EN 300 220-1	Radio Equipment and Systems (RES); Short range devices; Technical characteristics and test methods for radio equipment to be used in the 25 MHz to 1000 MHz frequency range with power levels ranging up to 500 mW.
EN 300 330	Radio Equipment and Systems (RES); Short range devices (SRDs); Technical characteristics and test methods for radio equipment in the frequency range 9 kHz to 25 MHz and inductive loop systems in the frequency range 9 kHz to 30 MHz.
I-ETS 300 440	Radio Equipment and Systems (RES); Short range devices; Technical characteristics and test methods for radio equipment to be used in the 1 GHz to 25 GHz frequency range.
Specific standards	
ETS 300 328	Radio Equipment and Systems (RES); Wideband transmission systems; Technical characteristics and test conditions for data transmission equipment operating in the 2.4 GHz ISM band and using spread spectrum modulation techniques.
EN 300 422	Radio Equipment and Systems (RES); Technical characteristics and test methods for wireless microphones in the 25 MHz to 3 GHz frequency range.
ETS 300 454	Radio Equipment and Systems (RES); Wide band audio links; Technical characteristics and test methods.
ETS 300 836-1	Radio Equipment and Systems (RES); HIgh PErformance Radio Local Area Network (HIPERLAN) Type 1 Conformance Testing Specification.
EN 300 674	Road Transport and Traffic Telematics (RTTT); Technical characteristics and test methods for Dedicated Short Range Communication (DSRC) transmission equipment (500 kbit/s / 250 kbit/s)
ETS 300 718	Radio Equipment and Systems (RES); Avalanche beacons; Transmitter-receiver systems.
EN 300 761	Radio Equipment and Systems (RES); Automatic Vehicle Identification (AVI) for Railways.
EN 301 091	Radio Equipment and Systems (RES); Automotive radar systems in the 76-77 GHz frequency band.
EN 301 357	Technical characteristics and test methods for analogue cordless wideband audio devices using integral antennas operating in the CEPT recommended 863 MHz to 865 MHz frequency range.

		Appendix 3, Pa	
Annex	Country	Restriction	Reason/remark
All Annexes			
	France	France does not recognise the former marking CEPT SRD Aa Y and CEPT RLAN Y recommended by T/R 01-04 and T/R 10-01 respectively. The free circulation and use of products bearing these old markings must then be confined to existing equipments and to countries which have already adopted these markings. The marking CEPT SRD Aa Y proposed by T/R 70-03 will not be recognised in France. In any case in France marking issues are in line with the R&TTE Directive.	
	Germany		Clarification of the terms contained in the table with reference to the German Telecommunications Act of 25 July 1996: The use of frequencies or frequency bands for the operation of transmitting equipment reuires "frequency assignment". There are two types of frequency assignments: individual frequency assignments are granted upon application and correspond to "individual licence required" within the meaning of CEPT/ERC/REC 70-03 (Appendix 1,Table 5, No 1.); general frequency assignments are granted ex officio by administrative act, published in the Regulatory Authority Official Gazette and correspond to "individual licence not required" within the the meaning of CEPT/ERC/REC 70-03 (Appendix 1,Table 5, No. 2)  A "licence" is required for the operation of transmission lines used to offer specified telecommunications services for the public and/or for voice telephony. A licence does not include the right to operate a radio system.
	Italy	Present legislation requires that use of SRD is subject to licence. Only door openers and radio-toys are excluded from this provision. Free circulation is not allowed. Legislative provisions will be provided in order to take into account the R&TTE Directive.	
	Lithuania	Individual licence for operation is	Present legislation requires that use of any transmitter is subject to licence.
	Moldova	Telecommunication equipment and cables are imported commercialized only on basis of conformity certificates issued by the Telecommunication Products Certification Body of Moldova and must be marked in Moldova. It is not permitted to ustilise non-certificated and non-marked telecommunication equipment and cables.  Subject to the above all SRD frequency bands with technical parameters indicated in ERC REC 70-03 are permitted on secondary basis	In accordance with Law of Telecommunications of Republic of Moldova.

permitted on secondary basis.

Annex	Country	Restriction	Reason/remark
	Portugal	Portugal is not in a position to commit to the ERC/DEC(97)10 on the mutual recognition of conformity assessment procedures including marking of radio equipment and radio terminal equipment. In accordance with the national legal framework Portugal is unable to utilise the mark as specified in Annex 2 of ERC/DEC/(97)10 aimed at the placing of these types of equipment on the market.  The present legislation requires that only equipment marked with the CE mark or, in its absence, with a national mark can be placed on the market.  Concerning free circulation, and in accordance with the present legislation, Portugal is not in a position to support and allow the free circulation of these types of equipment. The current legislation is being reviewed and is taking into account the R&TTE.	
	Russia	In accordance with the current National Frequency Allocation Table, different communication services, including special applications operate in frequency bands designated for SRD applications. All radiocommunication systems require individual license and authorization for using certain radio frequencies, which is granted after conformity assessment procedures. All types of radio equipment requires national approval based on the national standard system (GOST) and issue of conformity certificate. Only equipment with national mark can be placed on the market in Russia.

#### **Short Range Devices**

#### SRD APPLICATIONS IN BANDS ABOVE 2400 MHz

This spreadsheet is intended to give a rough guide to the frequencies generally available for Short Range Devices.

It should not be taken as a definitive statement of availability and the appropriate annexes should be referred to for the fine detail.

It should also be noted that not all the frequencies listed are available in all CEPT countries and therefore information on free circulation is only indicative

#### Annex 1

#### **Title: Non-specific Short Range Devices**

This annex is primarily for Telemetry, Telecommand, Alarms, Data in general and other similar applications. Video applications only above 2.4 GHz.

When selecting parameters for new SRDs, which may have inherent safety of human life implications, manufacturers and users should pay particular attention to the potential for interference from other systems operating in the same, or adjacent, bands.

Available ETSI Standard: EN 300 220-1

EN 300 330 I-ETS 300 440

Superseded Recommendations: CEPT Recommendation T/R 01-04

CEPT Recommendation T/R 20-03

Note: Equipment marketed before the adoption of this ERC Recommendation marked with the abbreviation CEPT LPD Y according to the abrogated CEPT Recommendation T/R 01-04 should be allowed continuation of free circulation and use.

Technical and regulatory parameters:

For interpretation of codes, see Appendix 1

	Frequency Band	Power	Antenna	Channel	Licensing	Approvals	Duty
		(Table 2)	(Table	spacing	requirement	(Table 6)	cycle
			3)	(Table 4)	(Table 5)		(Table 7)
a	6765 - 6795 kHz <sup>1</sup>	2	1 or 2	13	2	1, 2 or 4 <sup>4</sup>	[-]
b	13.553 - 13.567 MHz <sup>1</sup>	2	1 or 2	13	2	1, 2 or $4^4$	[-]
c	26.957 - 27.283 MHz <sup>1</sup>	2 or 8 <sup>2</sup>	1 or 2	13	2	1, 2 or $4^4$	[-]
d	40.660 - 40.700 MHz <sup>1</sup>	8 2	1 or 2	13	2	1, 2 or $4^4$	[-]
r	138.2 - 138.45 MHz	8 2	1 or 2	13	2	1, 2 or 4 <sup>4</sup>	2
e	433.050 - 434.790 MHz <sup>1, 3</sup>	8 2	1 or 2	13	2	1, 2 or $4^4$	3

The table continues on the next page.

<sup>&</sup>lt;sup>1</sup> The band is also designated for industrial, scientific and medical (ISM) application as defined in ITU Radio Regulations.

e.r.p

<sup>&</sup>lt;sup>3</sup> Audio and voice signals should be avoided in the band 433.050-434.790 MHz.

<sup>&</sup>lt;sup>4</sup> For countries which have implemented the R&TTE Directive

#### Technical and regulatory parameters:

For interpretation of codes, see Appendix 1

	Frequency Band	Power	Antenna	Channel	Licensing	Approvals	Duty
		(Table 2)	(Table 3)	spacing	requirement	(Table 6)	cycle
				(Table 4)	(Table 5)		(Table 7)
f	868.000 - 868.600 MHz <sup>5</sup>	$9^{2}$	1 or 2	13	2	1, 2 or $4^4$	2
g	868.700 - 869.200 MHz	$9^2$	1 or 2	13	2	$1, 2 \text{ or } 4^4$	1
[h	869.300 – 869.400 MHz <sup>6</sup>	t.b.d.	1 or 2	6	2	1, 2 or $4^4$	t.b.d.]
i	869.400 - 869.650 MHz	$12^{2}$	1 or 2	6 <sup>7</sup>	2	1, 2 or $4^4$	3
k	869.700 - 870.000 MHz <sup>8</sup>	$7a^2$	1 or 2	13	2	1, 2 or $4^4$	4
1	2400 - 2483.5 MHz <sup>1</sup>	89	1 or 2	13	2	1, 2 or $4^4$	[-]
m	5725 - 5875 MHz <sup>1</sup>	99	1 or 2	13	2	1, 2 or $4^4$	[-]
n	24.00 - 24.25 GHz <sup>1</sup>	11 <sup>9</sup>	1 or 2	13	2	1, 2 or $4^4$	[-]
О	61.0 - 61.5 GHz <sup>1,10</sup>	11 <sup>9</sup>	1 or 2	13	2	3 or 4 <sup>4</sup>	[-]
p	122 - 123 GHz <sup>1,10</sup>	119	1 or 2	13	2	3 or 4 <sup>4</sup>	[-]
q	244 - 246 GHz <sup>1,10</sup>	119	1 or 2	13	2	3 or 4 <sup>4</sup>	[-]

<sup>&</sup>lt;sup>5</sup> To avoid mutual interference between CT2 and SRDs it is recommended that SRDs below 868.5 MHz should avoid using a dedicated frequency channel and instead use a technology that allows automatic channel selection of a free channel within the band.

<sup>&</sup>lt;sup>6</sup> [SRD applications in the band 869.3-869.4 MHz should use an access protocol in accordance with EN XXX XXX].

<sup>7</sup> The whole frequency band may also be used as 1 channel for high speed data transmission.

<sup>&</sup>lt;sup>8</sup> The adjacent frequency band above this band (sub-band "k") has been designated for use by the high powered TETRA service. Manufacturers should take this into account in the design of the e.i.r.p. <sup>9</sup> e.i.r.p.

<sup>&</sup>lt;sup>10</sup> No ETSI standard currently available.

#### Annex 2

# **Title: Devices for Detecting Avalanche Victims**

Available ETSI Standard: ETS 300 718

Superseded Recommendations: CEPT Rec T/R 24-02

Technical and regulatory parameters:

For interpretation of codes, see Appendix 1

	Frequencies	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	2275 Hz	2	1	12 <sup>1</sup>	2	1, 2 or $4^2$	4
b	457 kHz	1	1	12 <sup>1</sup>	2	1, 2 or 4 <sup>2</sup>	4

 $<sup>^{\</sup>rm 1}$  Continuous wave (CW) – no modulation.  $^{\rm 2}$  For countries which have implemented the R&TTE Directive.

#### Annex 3

#### Title: Local Area Networks, RLANs and HIPERLANs

Radio Local Area Networks (RLANs) (formerly known as wideband data transmission systems)

Available ETSI Standard: ETS 300 328

Superseded Recommendations: CEPT Recommendation T/R 10-01

Note: Equipment marketed before the adoption of this ERC Recommendation marked with the abbreviation CEPT RLAN Y according to the abrogated CEPT Recommendation T/R 10-01 should be allowed continuation of free circulation (i.e. carrying) and use.

Technical and regulatory parameters: For interpretation of codes, see Appendix 1

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	2400 - 2483.5 MHz	11 <sup>1, 2</sup>	1 or 2	13 <sup>3</sup>	2	1, 2 or 4 <sup>4</sup>	-

e.i.r.p.

 $<sup>^2</sup>$  For direct sequence spread spectrum, the maximum spectrum power density is limited to -20 dBW/1 MHz. For frequency hopping spread spectrum, the maximum spectrum power density is limited to -10 dBW/100 kHz.

Minimum data rate: 250 kbit/s.

<sup>&</sup>lt;sup>4</sup> For countries which have implemented the R&TTE Directive.

### High Performance Radio Local Area Networks (HIPERLANs)

Available ETSI standard: EN 300 836-1

Spectrum relevant ERC Decision: ERC/DEC/(99)23

Superseded Recommendations: CEPT Recommendation T/R 22-06

Technical and regulatory parameters: For interpretation of codes, see Appendix 1

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing Requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
b	5150-5350 MHz <sup>1, 2</sup>	11a <sup>1, 3</sup>	2	13	2	1, 2 or 4 <sup>4</sup>	-
С	5470-5725 MHz <sup>2</sup>	13 <sup>1, 3</sup>	2	13	2	1, 2 or 4 <sup>4</sup>	-
d	17.1-17.3 GHz <sup>4</sup>	11 <sup>1</sup>	2	13	2	3 or 4 <sup>4</sup>	-

<sup>&</sup>lt;sup>1</sup> Indoor use only permitted.

 $<sup>^2</sup>$  HIPERLANs shall only be allowed to operate when the following mandatory features are realised: a) transmitter power control to ensure a mitigation factor of at least 3 dB; b) Dynamic Frequency Selection associated with the channel selection mechanism required to provide a uniform spread of the loading of the HIPERLANs across a minimum of 330 MHz or 255 MHz in the case of equipment used only in the band 5470 - 5725 MHz. For full details of the mandatory features required see the relevant ERC Decision and ETSI standards.

<sup>&</sup>lt;sup>3</sup> Maximum mean e.i.r.p. The mean e.i.r.p. refers here to the e.i.r.p. averaged over the transmission burst at the highest power control setting.

<sup>&</sup>lt;sup>4</sup> No ETSI standard currently available.

### Title: Railway applications

This annex covers applications specifically intended for use on railways including automatic vehicle identification and balises (train control systems).

## Automatic Vehicle Identification for Railways (AVI)

Available ETSI Standard: EN 300 761

Superseded Recommendations: None

Technical and regulatory parameters:

For interpretation of codes, see Appendix 1

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	2446-2454 MHz	12 <sup>1</sup>	1 or 2	$12^{2}$	2	1, 2 or 4 <sup>4</sup>	-

### Eurobalise

Available ETSI Standard: EN 300 330

Superseded Recommendations: None

Technical and regulatory parameters:

For interpretation of codes, see Appendix 1

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel Spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
b	27.095 MHz	$18^{3}$	2	$12^{3}$	2	1, 2 or 4 <sup>4</sup>	-

The maximum allowed H-field for the Eurobalise system is illustrated in Figure 1 overleaf.

<sup>&</sup>lt;sup>1</sup> e.i.r.p., transmitting only in presence of train.

<sup>&</sup>lt;sup>2</sup> 5 channels, each 1.5 MHz wide, within the band 2446-2454 MHz, i.e. 2447.0, 2448.5, 2450.0, 2451.5, 2453.0 MHz.

<sup>&</sup>lt;sup>3</sup> See spectrum mask in Figure 1.

<sup>&</sup>lt;sup>4</sup> For countries which have implemented the R&TTE Directive.

Figure 1. Magnetic field limits at 10 metre measurement distance for the Eurobalise system

## Euroloop

Available ETSI Standard: EN 300 330

Superseded Recommendations: None

Technical and regulatory parameters:

For interpretation of codes, see Appendix 1

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
c	4515 kHz	18 5, 6	2	12 <sup>5</sup>	2	1, 2 or 4 <sup>4</sup>	-

The maximum allowed H-field for the Euroloop system is illustrated in Figure 2 overleaf.

 $<sup>^5</sup>$  See spectrum mask in Figure 2.  $^6$  Transmitting only on receipt of a Eurobalise telepowering signal from a train.

**Figure 2.** Magnetic field limits at 10 metre measurement distance in 10 kHz measurement bandwidth for the Euroloop up-link transmission.

# Title: Road Transport &Traffic Telematics (RTTT)

Available ETSI Standard: EN 300 674

EN 301 091 ES 201 674-1 ES 201 674-2

Spectrum relevant ERC Decision: ERC/DEC/(92)02

Superseded Recommendations: CEPT Recommendation T/R 22-04

Technical and regulatory parameters:

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	5795-5805 MHz <sup>1</sup>	14 or 15 <sup>2</sup>	1 or 2	$12^{3}$	2	1, 2 or $4^7$	-
b	5805-5815 MHz <sup>4</sup>	14 or 15 <sup>2</sup>	1 or 2	12 <sup>3</sup>	1	$2, 3 \text{ or } 4^7$	-
c	63-64 GHz <sup>5</sup>	$16^{2}$	2	13	2	$1, 2 \text{ or } 4^7$	-
d	76-77 GHz <sup>6</sup>	17 <sup>2</sup>	2	13	2	1, 2 or $4^7$	-

 $<sup>^{1}</sup>$  5795-5805 MHz road to vehicle systems, particularly (but not exclusively) road toll systems.

<sup>&</sup>lt;sup>2</sup> e.i.r.p.

<sup>&</sup>lt;sup>3</sup> For <sup>5</sup> MHz channel spacing systems, frequencies are: 5800 MHz – 2.5 MHz; 5800 MHz + 2.5 MHz; 5810 MHz – 2.5 MHz; 5810 MHz + 2.5 MHz. For 10 MHz channel spacing systems, frequencies are 5800 MHz and 5810 MHz.

<sup>&</sup>lt;sup>4</sup> 5805-5815 MHz on a national basis for multi-lane road junctions, particularly, but not exclusively, road toll systems.

<sup>&</sup>lt;sup>5</sup> Vehicle to vehicle and road to vehicle systems.

<sup>&</sup>lt;sup>6</sup> Vehicle radar systems.

<sup>&</sup>lt;sup>7</sup> For countries which have implemented the R&TTE Directive

# Title: Equipment for Detecting Movement and Equipment for Alert

Available ETSI Standard: I-ETS 300 440

Superseded Recommendations: CEPT Recommendation T/R 60-01

Technical and regulatory parameters:

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	2400-2483.5 MHz	9 <sup>1</sup>	1 or 2	13	$2^2$	$2, 3 \text{ or } 4^3$	-
b	9200-9500 MHz	91	1 or 2	13	$2^2$	$2, 3 \text{ or } 4^3$	-
c	9500-9975 MHz	91	1 or 2	13	$2^2$	1, 2 or $4^3$	-
d	10.5-10.6 GHz	12 <sup>1</sup>	1 or 2	13	1	$2, 3 \text{ or } 4^3$	-
e	13.4-14.0 GHz	9 <sup>1</sup>	1 or 2	13	$2^2$	1, 2 or $4^3$	-
f	24.05-24.25 GHz	11 <sup>1</sup>	1 or 2	13	$2^2$	1, 2 or $4^3$	-

<sup>&</sup>lt;sup>1</sup> e.i.r.p.

<sup>&</sup>lt;sup>2</sup> Some countries may allow equipment with transmitter powers between 25 mW and 500 mW in which case an individual licence or a general licence may be required.

<sup>3</sup> For countries which have implemented the R&TTE Directive.

Title: Alarms

This annex covers frequency bands recommended exclusively for alarm systems including social alarms and alarms for security and safety.

When selecting parameters for new SRDs, which may have inherent safety of human life implications, manufacturers and users should pay particular attention to the potential for interference from other systems operating in the same or adjacent bands.

Available ETSI Standard: EN 300 220-1 and EN 300 220-2 where applicable

Spectrum relevant ERC Decision: ERC/DEC/(97)06

Superseded Recommendations:

Technical and regulatory parameters:

For interpretation of codes, see Appendix 1

Alarms in general

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	868.600-868.700 MHz	8 <sup>1</sup>	1 or 2	$6^2$	2	1, 2 or 4 <sup>3</sup>	1
b	869.250-869.300 MHz	8 <sup>1</sup>	1 or 2	6	2	1, 2 or 4 <sup>3</sup>	1
c	869.650-869.700 MHz	91	1 or 2	6	2	1, 2 or 4 <sup>3</sup>	3

# **Social Alarms**

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
d	869.200-869.250 MHz	8 <sup>1</sup>	1 or 2	6	2	1, 2 or $4^3$	1

e.r.p.

<sup>&</sup>lt;sup>2</sup> The whole frequency band may also be used as 1 channel for high speed data transmission.

<sup>&</sup>lt;sup>3</sup> For countries which have implemented the R&TTE Directive.

**Title: Model Control** 

This annex covers the application of model control equipment, which is solely for the purpose of controlling the movement of the model, in the air, on land or over or under the water surface. Although the bands are not harmonised, the parameters given in the table are common in a majority of CEPT countries. Additional frequencies or frequency bands may be available for use in particular countries. It should be noted that the bands are not exclusive for this type of application.

Available ETSI Standard: EN 300 220-1

Superseded Recommendations: CEPT Recommendation T/R 20-03

CEPT Recommendation T/R 20-04

Technical and regulatory parameters:

	Frequency Bands or Channels	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	26.995, 27.045, 27.095, 27.145, 27.195 MHz	11 <sup>1</sup>	2	3	2	1, 2 or $4^3$	-
b	34.995-35.225 MHz <sup>2</sup>	11 <sup>1</sup>	2	3	2	1, 2 or $4^3$	-
С	40.665, 40.675, 40.685, 40.695 MHz	11 <sup>1</sup>	2	3	2	$1, 2 \text{ or } 4^3$	-

¹ e.r.p.

<sup>&</sup>lt;sup>2</sup> Only allowed for flying models.

<sup>&</sup>lt;sup>3</sup> For countries which have implemented the R&TTE Directive.

### **Title: Inductive applications**

Inductive applications include for example car immobilisers, animal identification, alarm systems, cable detection, waste management, personal identification, wireless voice links, access control, proximity sensors, antitheft systems including RF anti-theft induction systems<sup>1</sup>, data transfer to handheld devices, automatic article identification, wireless control systems and automatic road tolling.

When selecting parameters for new SRDs, which may have inherent safety of human life implications, manufacturers and users should pay particular attention to the potential for interference from other systems operating in the same, or adjacent, bands.

Users should be aware that emissions from inductive applications could cause interference to nearby receivers of other radio services.

Particular attention should also be paid to the more stringent protection requirements identified by the ITU for global distress and safety communications frequencies in the same or adjacent bands.

Available ETSI Standard: EN 300 330

Superseded Recommendations: None

Technical and regulatory parameters: For interpretation of codes, see Appendix 1

	Frequency Band	Field Strength (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
aa	9-59.750 kHz	3 <sup>2</sup>	1, 2 or 3 <sup>3</sup>	13	2	1, 2 or 4 <sup>4</sup>	-
ab	59.750 – 60.250 kHz	2	1, 2 or 3 <sup>3</sup>	13	2	1, 2 or 4 <sup>4</sup>	ı
ac	60.250 – 70 kHz	$3^2$	1, 2 or $3^3$	13	2	1, 2 or 4 <sup>4</sup>	ı
b	70-119 kHz	2	1, 2 or 3 <sup>3</sup>	13	2	1, 2 or 4 <sup>4</sup>	-
с	119-135 kHz	3 <sup>2</sup>	1, 2 or $3^3$	13	2	1, 2 or 4 <sup>4</sup>	-

The maximum allowed H-field for bands a, b and c is illustrated in Figure 1 overleaf.

<sup>&</sup>lt;sup>1</sup> Other types of anti-theft systems can be operated in accordance with other relevant annexes.

<sup>&</sup>lt;sup>2</sup> In the case of loop antennas type 1 and 2 with an area between 0.05 m<sup>2</sup> and 0.16 m<sup>2</sup>, the field strength 3 is reduced by 10 x log (area/0.16 m<sup>2</sup>); for an antenna area less than 0.05 m<sup>2</sup> the field strength 3 is reduced by 10 dB.

<sup>&</sup>lt;sup>3</sup> In the case of type 3 antennas only loop coil antennas should be employed.

<sup>&</sup>lt;sup>4</sup> For countries which have implemented the R&TTE Directive.

Figure 1. 9-135 kHz magnetic field strength limits at 10-metre measurement distance.

	Frequency Band <sup>5</sup>	Field Strength (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
d	6765 - 6795 kHz	$2^6$	1 or 2	13	2	1, 2 or 4 <sup>4</sup>	-
e	7400 - 8800 kHz	5	1 or 2	13	2	1, 2 or 4 <sup>4</sup>	-
f	13.553 - 13.567 MHz	2 <sup>6</sup>	1 or 2	13	2	1, 2 or 4 <sup>4</sup>	-
g	26.957 - 27.283 MHz	2	1 or 2	13	2	1, 2 or 4 <sup>4</sup>	-

## The maximum allowed H-field limits for bands d and f are illustrated in Figure 2

Figure 2. Magnetic field strength limits at 10 metre measurement distance for the 6.78 MHz and 13.56 MHz bands.

 $<sup>^{\</sup>rm 5}$  Other frequency bands below 30 MHz are under study.

<sup>&</sup>lt;sup>6</sup> See spectrum mask in Figure 2.

# Title: Radio microphones

Radio microphones (also referred to as wireless microphones or cordless microphones) are small, low power (50mW or less) transmitters designed to be worn on the body, or hand held, for the transmission of close, personal sound. The receivers are more tailored to specific uses and may range from small and portable to rack mounted modules as part of a multichannel system. This annex covers professional and consumer radio microphones, both hand-held and body-worn, and aids for the handicapped.

Available ETSI Standard: EN 300 422

Superseded recommendations: CEPT Recommendation T/R 20-06.

Technical and regulatory parameters:

For interpretation of codes, see Appendix 1.

### Frequency Bands:

Because of the difficulty in determining harmonised frequency bands for radio microphones, frequency band limits should be regarded as tuning ranges within which a device can be designed to operate. In most cases, Appendix 3 indicates those parts of a range that are not available in individual countries but this does not apply to the broadcasting bands at 174-216 MHz and 470-862 MHz where national geographical restrictions are likely to exist and the national administration should be contacted.

### **Narrow Band Audio**

	Frequency Band	Power (Table2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty Cycle (Table 7)
a	29.7-47.0 MHz <sup>1, 2</sup>	8 <sup>3</sup>	1 or 2	$7^4$	2	2, 3 or $4^6$	4

### Aids for the handicapped

	Frequency Band	Power (Table2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty Cycle (Table 7)
b	173.965-174.015 MHz <sup>5</sup>	$7^{3}$	1 or 2	$7^4$	2	1, 2 or $4^6$	4

<sup>&</sup>lt;sup>1</sup> Tuning range – national restrictions may apply.

 $<sup>^{2}</sup>$  30.3 – 30.5 MHz, 32.15 – 32.45 MHz and 41.015 – 47.000 MHz are harmonised military bands.

<sup>&</sup>lt;sup>3</sup> Maximum permitted e.r.p.

<sup>&</sup>lt;sup>4</sup> Maximum permitted channel spacing.

<sup>&</sup>lt;sup>5</sup> This allocation may be subjected to high levels of interference from broadcasting services in some countries.

<sup>&</sup>lt;sup>6</sup> For countries which have implemented the R&TTE Directive.

# Consumer radio microphones

	Frequency Band	Power (Table2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty Cycle (Table 7)
с	863-865 MHz	8 <sup>3</sup>	1 or 2	11 <sup>4</sup>	2	1, 2 or 4 <sup>6</sup>	4

# Professional radio microphones

	Frequency Band	Power (Table2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty Cycle (Table 7)
d	174-216 MHz <sup>1</sup>	8 <sup>3</sup> or 10 <sup>3, 7</sup>	1 or 2	11 <sup>4</sup>	1	1, 2 or 4 <sup>6</sup>	4
e	470-862 MHz <sup>1</sup>	8 <sup>3</sup> or 10 <sup>3, 7</sup>	1 or 2	11 <sup>4</sup>	1	1, 2 or 4 <sup>6</sup>	4
f	1785-1800 MHz <sup>8</sup>	8 <sup>9</sup> or 10 <sup>7, 9</sup>	1 or 2	11 <sup>4</sup>	1	1, 2 or 4 <sup>6</sup>	4

 $<sup>^7</sup>$  Body-worn radio microphones.  $^8$  Guard bands at 1785.0-1785.7 and 1799.4-1800 MHz may be required to protect services in adjacents bands.  $^9$  Maximum permitted e.i.r.p.

## **Title: Ultra Low Power Active Medical Implants**

This annex covers active implantable medical devices (for convenient definitions see the EC directive 90/385/EEC (Active Implantable Medical Device directive)).

Available ETSI Standard: EN 300 220-1

Superseded recommendations: None

Technical and regulatory parameters:

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requirement (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	402-405 MHz	5a <sup>1</sup>	1 or 2	6 <sup>2</sup>	2	1, 2 or $4^3$	-

 $<sup>^{1}</sup>$  e.r.p.  $^{2}$  Individual transmitters may combine adjacent channels for increased bandwidth up to 300 kHz.

<sup>&</sup>lt;sup>3</sup> For countries which have implemented the R&TTE Directive.

## **Title: Wireless Audio Applications**

Applications for wireless audio systems include the following, cordless loudspeakers; cordless headphones; cordless headphones for portable use, for example portable CD, cassette or radio devices carried on a person; cordless headphones for use in a vehicle, for example for use with a radio or mobile telephone etc.; in-ear monitoring, for use with concerts or other stage productions.

Radio microphones are not included in this Annex.

Systems should be designed so that in the absence of an audio input there should be no transmission of an RF carrier.

Available ETSI Standard: EN 301 357

Superseded recommendations: None

Technical and regulatory parameters:

	Frequency Band	Power (Table 2)	Antenna (Table 3)	Channel spacing (Table 4)	Licensing requireme nt (Table 5)	Approvals (Table 6)	Duty cycle (Table 7)
a	863-865 MHz	$8^1$	1	$13^{2}$	2	1, 2 or $4^3$	4

e.r.p.

In the case of analogue systems the maximum occupied bandwidth should not exceed 300 kHz. Digital systems are under study.

<sup>&</sup>lt;sup>3</sup> For countries which have implemented the R&TTE Directive
